

Farm area : dairy

storage : 70 kg drums

raise the drums of the floor for easy washing

› the dock® 1.0 for 70 kg drums

All our products are welded using an assembly process of automobile production lines : spot welding without metal addition.

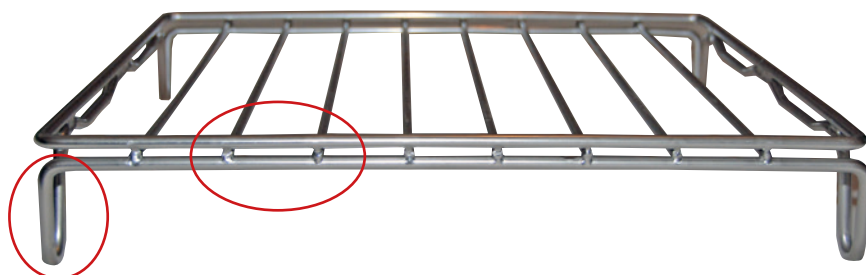

We use high quality stainless steel (food compliant) for this product.

This stainless steel undergoes two surface treatments (quenching bath) :

- electropolishing : it makes the surface bright and reduce the adhesion of dirt.

- passivation: it makes the steel more resistant to corrosion and oxidation.

Conclusion : a clean and healthy equipment which will retain its quality for a long time.

- the transverse wires are sandwiched : they are more resistant
- the edge prevents the drum from slipping off the dock : no danger, everything is stable
- the legs have a very small area of contact with the floor : very little dirt accumulated by repeated washings

› the strengths

- › 100% stainless steel : durability, hygiene
- › special stainless steel wire treatment : dirt does not adhere
- › suitable for all sizes of drums
- › the floor is free for easy cleaning
- › an affordable and scalable système

(see roll 2.0)

Factsheet

The dock 1.0 can raise of the floor heavy drums of 70 kg for an efficient washing of the dairy floor each day. The dock is part of an evolving system (see roll 2.0).

Details : height 80 mm, width 450 mm, length 450 mm. Ø 8 mm stainless steel wire for the frame and legs, Ø 6 mm for traverses.
