

Farm area : dairy

handling of 70 kg drums, buckets, ...
move and set up the drums on the Dock® 1.0

› the roll 2.0 an easier work, for a more efficient work

fits with the Dock® for drums

All our products are welded using an assembly process of automobile production lines : spot welding without metal addition.

We use high quality stainless steel (food compliant) for this product. This stainless steel undergoes two surface treatments (quenching bath) :

- electropolishing : it makes the surface bright and reduce the adhesion of dirt.

- passivation: it makes the steel more resistant to corrosion and oxidation.

Conclusion : a clean and healthy equipment which will retain its quality for a long time.

handling bar

› the strengths

- › 100% stainless steel for durability, hygiene
- › special stainless steel wire treatment : dirt does not adhere
- › suitable for all sizes of drums
- › seat formed for buckets
- › multipurpose
- › goes everywhere, handy

Factsheet

The roll 2.0 can move loads (such as drums of acid or alkaline of 70 kg) of less than 80 kg on uneven surfaces. The top is formed to prevent a bucket or a drum to slip during the handling.

Details : height 210 mm, width 520 mm, length 620 mm. 100% stainless steel. Nylon wheel Ø130mm. Stainless steel handling bar.
